ASSIGNMENT PART A

CSI697 Data Warehousing Assignments

Each Student Must:

DO NOT COPY

Choose any business system environment where an implementation of a Data warehouse may be relevant. Design a Data Warehouse **guided by** and not limited to the following procedures in SECTION 1 –5;

Section A Problem Formulation and Requirements Blue Print

1.0 Justification for a Data Warehouse

- Does your company really need a data warehouse?
- Is it really ready for one?
- What is the current infrastructure?
- What would be the application area (Financial, Marketing, Engineering, ALL etc) for the DW?
- Who will be using the data warehouse?
- What are the specific user needs/goals of the data warehouse

2.0 Type and level of the decision making

- What are the expectations?
- What are the criteria for assessing the value expected from your data warehouse?
    - Will it help the executives and managers to do better planning and make better decisions?
    - Is it going to improve the bottom line? How?
    - Is it going to increase market share? If so, by how much?
    - What are the risks faced by the company without the benefits derivable from a data warehouse? What losses are likely to be incurred?

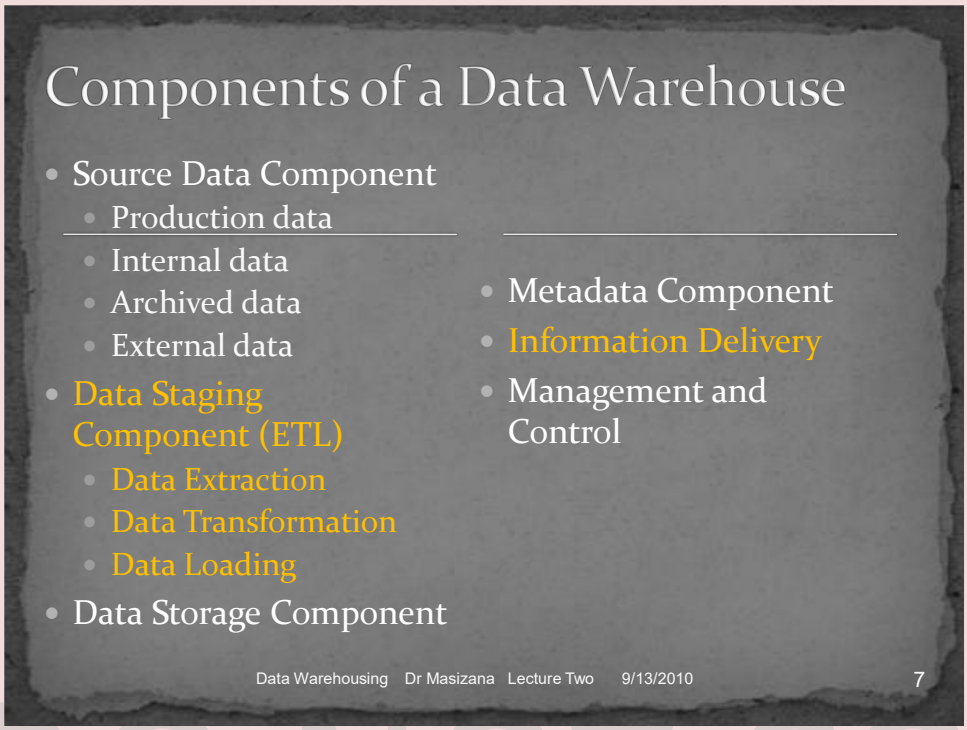

DO NOT COPY

3.0 Requirements of the DW (see guide from Illinois feasibility document)

- What software methodology is employed to solicit the requirements and why? *(JAD, Document Analysis, Questionnaires, Structured interview, Unstructured Interview, Ethnography, Card sorting, Laddering, Protocol Analysis, Repertory Grids, Brainstorming, Prototyping, Scenario Analysis, Introspection, Requirements Reuse, Focus Group, Interaction Analysis)*

- What are the specific Business Requirements? What are the specific Data Requirements? (*These must go with the objectives*)
- What type of data warehouse to be built and where to is it to be kept it. (*These must go with the objectives)*
    - Where the data is is going to come?
    - Have we all the needed data?

*4.0 Describe the Major Components of the Data Warehouse In terms of: (*see guide from Illinois feasibility document)

DO NOT COPY

5.0 What is the Recommended Approach of Development (Inmon vs Kimball) why?

Main Focus: You shall be greatly marked on the RESEARCH and application of knowledge into this section.

Presentation

An oral presentation will be arranged which covers all the above tasks.

Dates shall be communicated in due course

Marks

Oral Presentation (40%)

Section B

System (60%)

Clearly Document each section of your task in not less than the number of pages stated;

You are here -----→ Part A: Problem Formulation and Requirements Analysis Blueprint (5 pages)

Part B: Architectural Blueprint and Design (5 pages)

Part C: Implementation of a prototype (5 pages)

Part D: Information Delivery (5 pages)
